WHO WE ARE

V&G is a Fresno-based certified **Small Business (SB)** founded in 2006, operating two integrated divisions: **Concrete** and **Construction Management**. V&G combines hands-on contractor experience with construction management, which allows the V&G team to anticipate field challenges, give smart and proven recommendations to our clients, optimize execution, and deliver constructible and reasonable solutions.

V&G is a key subconsultant on the California High-Speed Rail Authority **Construction Package 1**, providing professional services for third-party, utility, railroad, and right-of-way coordination; field engineering; design/verification and validation support; change management; document control; and project administration across the 32-mile corridor of guideway and newly built Type 1/Type 2 structures in urban and rural environments. The V&G team developed streamlined third-party utility relocation workflows and implemented them in collaboration with the Authority.

OUR SERVICES

Construction Management	Construction management, schedule oversight, cost controls, engineering support, and construction support services. **Past Performance** California High-Speed Rail Construction Package 1
Third-Party & Utility Coordination	Design and construction procurement, utility design support, environmental support, utility relocation construction management, and closeout. **Past Performance** Supported relocation of 900+ utility conflicts across 20+ third parties.
